***October 8, 2024***

## **VRE POLICY**

It is the policy of the Virginia Railroad Express (VRE) to comply fully with all applicable laws and regulations concerning project activities on VRE property and equipment (including rolling stock).

All companies performing any work on VRE property must have an adequate written "Safety and Security Plan" to protect the safety of people and property on site and the surrounding area. The "Plan" must be reviewed and approved by the VRE Project Manager and the Manager of System Safety and Security. Upon approval, the "Plan" must be strictly followed by the Contractor performing the work.

Safety & Security

*Rules to Live By*

**Remember, there is no assignment so important that we cannot take the time to do our work Safely.**

## The Virginia Railway Express Rules to Live By Acknowledgement Form

The pages of this safety manual and the companion video form the basis of conduct for all employees granted access to VRE Property. The instructions herein serve as a minimum standard and will not supersede regulations, policies, and rules that are more restrictive. If any instruction outlined herein is determined to be less restrictive than another applicable regulation, policy, or rule, the most restrictive terms will apply.

Remember, you are accountable for your safety.

By signing this form, each employee certifies that they have read, understand, and guarantee compliance with the instructions in this book and any other applicable local, state, federal, and railroad regulations in effect.

Employee Name \_\_\_\_\_ Date \_\_\_\_\_

Signature \_\_\_\_\_

Detach here.

## Document Revisions

This is a controlled document. Anyone referring to a copy of this document should verify they are using the latest revision. Document holders are required to keep their plans up to date by discarding obsolete documents and replacing them with updated documents.

### Document Revision Record

Revision	Date	Pages(s)	Description
0	October 8, 2024	All Pages	Original. Revised in entirety.

## Endorsements

This Plan has been developed in good faith and in consultation with VRE's directly affected employees. The VRE Chief Executive Officer and Safety & Security Manager hereby approve and certify the accuracy of this plan and agree to comply with, implement, and enforce the requirements specified herein.

## Introduction

Virginia Railway Express (VRE) is a commuter-rail system that connects the communities of Northern Virginia with the central business districts of Alexandria, Crystal City, southeast Washington D.C and Capitol Hill. We offer our passengers a safe, clean and comfortable service and are proud of the work our staff and contract employees do every day to ensure our passengers get the best experience VRE can offer.

We are excited to welcome you and hope you enjoy your experience at VRE. Always remember that when on VRE Property, you are VRE. Your actions and appearance are the first impression for a number of regional contractors and regulatory agency personnel. Professionalism and courtesy are expected at all times. Additionally, please know that you will always have the full support from all levels of VRE to immediately report an unsafe or unsecure condition or practice.

Safety and security are two critical areas that contribute to VRE's success. Safe companies are able to hire and retain the best employees who in turn work to deliver a great experience to passengers. Additionally, the region we operate within is one of the most security sensitive regions in the United States; each of us must constantly be aware of our unique role in securing VRE and never become complacent.

This manual is intended to serve as a standard of conduct for all employees working on VRE Property. Compliance with the standards herein is essential and will help ensure your safety. The work you perform is vital, and we thank you for your service.

Sincerely,

Rich Dalton  
Chief Executive Officer  
Virginia Railway Express

## 1.0 BACKGROUND

VRE was established under the terms of the *Master Agreement for the Provision of Commuter Rail Services in Northern Virginia - Establishment of the Virginia Railway Express* with service beginning in the summer of 1992. This agreement was created by the Northern Virginia Transportation Commission (NVTC), the Potomac and Rappahannock Transportation Commission (PRTC), and each of the nine member jurisdictions. Members of both commissions sit on the VRE Operations Board, which is responsible for making recommendations to the commissions with respect to VRE's management, financing, and acquisition of property. Member jurisdictions include Spotsylvania County, City of Fredericksburg, Stafford County, Prince William County, City of Manassas, City of Manassas Park, Fairfax County, Arlington County, and City of Alexandria. The Virginia Secretary of Transportation also has a seat on the VRE Operations Board.

The VRE System encompasses approximately 87 miles of track and 19 stations. Commuter Service is provided on two lines — the Manassas and Fredericksburg Lines. These lines operate through a variety of environments and conditions including tunnels, bridges, and grade crossings. These lines are in the vicinity of electric power lines, pipelines, industrial facilities, and highways.

VRE's service consists of 32 daily revenue trains providing weekday service with most trips timed to bring passengers to Washington, D.C. for work in the morning and from Washington, D.C. back home in the evening.

VRE is operated under contract by Keolis Rail Services Virginia (KRSV) over tracks owned by Amtrak, CSXT, Norfolk Southern, and the Virginia Passenger Rail Authority. Ownership of the stations is divided among Amtrak, CSXT, VRE, and various local jurisdictions and entities. Train dispatching and railroad right-of-way maintenance is performed by Amtrak, CSXT, and Norfolk Southern.

VRE owns its fleet which consists of 100 passenger railcars and 20 locomotives. Trains typically consist of one locomotive and four to eight passenger cars operating in a push-pull configuration. This allows the train to operate with the locomotive in the same position regardless of the direction of travel. Train crews consist of an engineer, a conductor and one or more assistant conductors.

Outside of service hours, trains are kept at the Broad Run Maintenance and Storage Facility (MSF) in Bristow, Virginia and the Crossroads MSF in Fredericksburg, Virginia. Mechanical services are performed under contract by KRSV at these two facilities. During

service hours, trains are stored at Amtrak's Ivy City Yard in Washington, D.C. and a storage track located at the VRE L'Enfant Station.

Additionally, VRE maintains a communications center at its headquarters in Alexandria, VA. At the center, VRE staff monitor train tracking software, dispatch screens, and radio channels for the purpose of providing a variety of internal management alerts and public communications. During service delays the VRE Communications team provides regular updates through use of variable messaging screens, general station announcements, text alerts, emails, social media, and the VRE website.

## 2.0 REGULATIONS & POLICY

The Virginia Railway Express is subject to a variety of laws, requirements, and rules set forth by a number of entities including:

- Federal Law
- Federal Agencies such as the Federal Railroad Administration (FRA), Federal Transit Administration (FTA), & Transportation Security Administration (TSA)
- The Commonwealth of Virginia & the District of Columbia
- The Virginia Department of Transportation (VDOT)
- The Virginia Passenger Rail Authority
- Local Jurisdictions
- Host Railroads: CSX Transportation, Norfolk Southern, & Amtrak

The Rules to Live By is a manual which provides the most basic foundational safety and security principles to help you successfully perform your work at VRE. All VRE employees are required to be familiar with the requirements outlined herein and follow them carefully. If any instruction outlined herein is determined to be less restrictive than another applicable regulation, policy, or rule, the most restrictive terms will apply.

**The Rules to Live By is a manual which provides the most basic foundational safety and security principles to help you successfully work at VRE.**

## 3.0 REQUIRED TRAINING

The Rules to Live By provides an overview of what is expected of VRE employees during day-to-day operations. Depending on your role at VRE, you may be asked to complete specific types of safety training. This may include courses such as Roadway Worker Protection (RWP) training and Blue Flag Protection training.

It's important to understand all specific training requirements and tools needed for your particular position. All employees of VRE are expected to speak to their supervisor about the training requirements of their position.

**Each job is unique.**

**Speak to your supervisor about the training  
required for your job.**

## 4.0 RISKS & POTENTIAL HAZARDS

VRE's regular operations and special projects have the potential to create hazardous conditions. In addition to adherence to standard operating procedures, situational awareness is a key component to mitigating these risks. Below is a table outlining potential risks you may encounter while working within our service area:

 <p><b>Impact Threats</b></p>	<p>All railroad tracks are to be considered active. VRE trains can operate from either direction. <b>Anyone on or about VRE or host railroad property must expect moving rail equipment on any track, in any direction, at any time.</b></p> <p>In addition to rail traffic, examples of impact threats include falling objects from moving equipment or overhead maintenance work.</p>
 <p><b>Slips / Trips / Falls</b></p>	<p>VRE's service area, especially the MSFs and the railroad right-of-way, contain many slip, trip, and fall risks. Examples:</p> <ul style="list-style-type: none"> <li>➤ Ballast (the rocks along the railroad track bed).</li> <li>➤ Rails especially when wet</li> <li>➤ Components of the railroad such as switch stands, derails, and blue flags.</li> <li>➤ Hoses and cables attached to a train or maintenance tools.</li> <li>➤ Underground pits designed for servicing trains.</li> </ul>
 <p><b>Pinch / Crush Hazards</b></p>	<p>Some VRE operations, especially mechanical, maintenance, and construction work, create potential pinch points and crush hazards. Components that fit together, can be opened and closed, or form a mechanically tight connection, can trap body parts.</p>
 <p><b>Electrical Hazards</b></p>	<p>VRE trains are connected to ground power electrical stations at the Broad Run MSF, Crossroads MSF, Amtrak Ivy City Yard, and L'Enfant Storage track. These cables have 480 volts. <b>Always keep your distance from these cables and assume they may be energized and unprotected.</b></p> <p>Certain construction and maintenance tools can also pose a risk. Speak to your supervisor about your team's policies as it relates to lock out tag out procedures and other safeguards.</p>

 <p><b>Chemical Hazards</b></p>	<p>VRE trains run on diesel fuel. Flammable materials such as oil are kept on site along with other materials that can cause irritation or bodily harm as well as environmental damage. Ask your supervisor about any precautions you should take in this area. VRE has eyewash stations, first aid kits, and access to Safety Data Sheets that can assist with chemical exposure. Tell your supervisor if you witness a materials spill.</p>
--	---

\*See glossary at the end of this document for definitions of some of the items you may encounter

**Remember! Always expect train movement.**

**Rail equipment can move on any track, in any direction, at any time.**

## 5.0 JOB & SAFETY BRIEFING

Job and safety briefings are a critical element to ensuring work performed anywhere on VRE Property is completed safely and correctly. Never assume that every employee in your group has a complete understanding of the work that will need to be done, the hazards that exist at the job site, or the best actions to take in the event of an emergency.

Job and safety briefings must be detailed and take place prior to starting any work. They should include specifics about the work being performed and any potential train, vehicle, or equipment movements in the area. Other useful information such as slip, trip, and fall hazards, weather conditions, emergency response plans, and good housekeeping measures should be discussed as well.

In the event something changes during work or more employees arrive, stop work and hold another complete job and safety briefing so that everyone has the same level of awareness and understanding.

Ensure that your prework job and safety briefing identifies a place of safety away from your worksite and away from active railroad tracks, power lines, etc. This spot will be used for employees to evacuate in the event of an emergency.

**See Appendix for VRE's official Job & Safety Briefing Guides.**

### **Job & Safety Briefings Discuss:**

- **The Nature of the Work**
- **Potential Risks & Hazards**
- **How to Protect Yourself**

## 6.0 PERSONAL PROTECTIVE EQUIPMENT (PPE)

When performing work on VRE Property you will encounter operational risks that occur on a day-to-day basis. While many of these risks can be mitigated through engineering and administrative controls, they are rarely fully eliminated. Personal Protective Equipment or PPE is equipment worn to minimize exposure to these hazards and protect yourself against injury and illness.

VRE has Four Standard PPE Requirements: Eye Protection, Safety Shoes, Reflective Wear, and Protective Attire. Reflective vests and eye protection are available at VRE Maintenance and Storage Facilities and VRE Headquarters for staff members, contractors, and visitors.

All VRE staff and contractors are responsible for ensuring their PPE is in good working order. Inspect the condition of your PPE prior to your tour of duty. Any damaged, improperly functioning, or missing elements of PPE should be reported to your immediate supervisor upon discovery.

**You are required to follow VRE's Four Standard PPE Requirements if:**

- You work on the grounds of:
  - VRE's Crossroads MSF
  - VRE's Broad Run MSF
  - Amtrak's Ivy City Yard
  - VRE's L'Enfant Storage Track
- You work inside VRE's Crossroads Warehouse facility
- You work inside a VRE Service and Inspection building
- You work inside the Crossroads Lifecycle Overhaul and Upgrade building
- You work on or adjacent to track or railroad equipment
- You work in construction or a physical trade
- You perform maintenance functions at VRE stations

VRE'S Four Standard PPE Requirements are listed on the next page:

## VRE's Four Standard PPE Requirements

<p style="text-align: center;"><b>1. Eye Protection</b></p> 	<p>Eye protection that meets <u>ANSI Z87.1</u> with side shields is required. Prescription eye protection must meet ANSI Z87.1 and may not be of a variable tint type. Exceptions are when indoors in an office or restroom. Sunglasses that meet ANSI Z87.1 with side shields may be worn outdoors only. Prescription wearers are permitted to wear “drop-in” type glasses.</p> <p>Splash or impact goggles and/or full-face shields may be required for certain types of work involving compressed air or potential blowback, specific chemicals, wastewater, and specialized tools such as grinders. Speak with your supervisor about any additional requirements in this area.</p>
<p style="text-align: center;"><b>2. Safety Shoes</b></p> 	<p>Safety shoes must comply with the following minimum standards:</p> <ol style="list-style-type: none"> <li>1. Leather or leather-like material</li> <li>2. Minimum of six (6) inches in height</li> <li>3. Lace up</li> <li>4. Defined heel</li> <li>5. Slip resistant rugged soles</li> <li>6. Sturdy design applicable to the type of work performed</li> <li>7. Steel or composite safety toes if working in a mechanical or construction role</li> </ol>
<p style="text-align: center;"><b>3. Reflective Wear</b></p> 	<p>Reflective vests, shirts, or jackets consistent with <u>ANSI Class II</u> standards featuring <u>lime green cloth</u> and reflective striping is required. Vests must be breakaway style. Long-sleeve coats or jackets that conform to ANSI Class II standards are not required to be breakaway.</p>
<p style="text-align: center;"><b>4. Protective Attire</b></p> 	<p>Long pants free of tears or holes are required. Shirts with short or long sleeves are required. No tank tops or cut off sleeves are permitted. Loose fitting clothing or clothing with drawstrings or other hanging components have the potential for getting caught on equipment or other obstacles. It is not permitted.</p> <p>Attire should match weather conditions to prevent exposure-related illness or injury.</p>

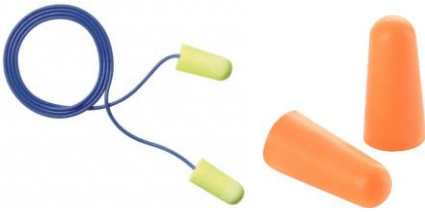

## Specialized PPE Requirements

### You are required to wear Hard Hats if:

- Entering the fall zone of cranes or equipment jacks
- Performing work under equipment (bump caps are an acceptable alternative for work under equipment as well)
- Overhead facility repairs are being performed in the Service and Inspection (S&I) or Lifecycle Overhaul and Upgrade (LOU) buildings
- Designated by signs or supervisor’s instruction.

### You are required to wear Hearing Protection if:

- Conducting load tests on locomotives (Main Engine or HEP)
- Designated by official standard operating procedures, signs, or supervisor’s instructions.
- Speak with your foremen or roadway worker in charge to determine if hearing protection can be safety worn near active mainline tracks.

<p><b>Hard Hats</b></p> 	<p>Hard hats that meet <u>ANSI Type 1, Class E</u> standards are required.</p> <p>Hard hats must be in good condition and may not be altered or changed (i.e., painted). Do not alter the suspension or punch holes in a hard hat. Whenever hard hats are worn, the bill must be facing forward, except when equipped with welding hood attachments.</p>
<p><b>Hearing Protection</b></p> 	<p>If required in your role, the following types of ear protection can be used; they must be in good condition and may not be altered:</p> <ul style="list-style-type: none"> <li>• Expandable foam plugs</li> <li>• Canal caps</li> <li>• Earmuffs</li> </ul> <p>Speak to your supervisor about possible additional requirements.</p>
<p><b>Job-Specific PPE</b></p>	<p>Each job is unique.</p> <p>Speak to your supervisor about the specialized PPE required for your work activities.</p>

## PPE Requirement Exemptions

Couriers and drivers with the sole purpose of making deliveries to VRE MSFs who are not under contract with VRE are exempt from PPE requirements unless otherwise required by VRE personnel in charge.

Train crews (Engineers, Conductors, and Assistant Conductors) while performing their duties onboard trains or on station platforms are exempt from the requirements to wear reflective material. Train crews are required to follow all PPE requirements including the use of reflective material in all other locations. (i.e. railroad right-of-way and maintenance and storage facilities).

## 7.0 TRACK AND TRAIN SAFETY

When performing work near or about railroad tracks, it's important to consider how you move about the space. All tracks are to be considered active. Anyone on or about VRE Property, VPRA property, or host railroad property must expect moving rail equipment on any track, at any time and operating in either direction. Work within the maintenance and storage facilities is managed by a designated responsible employee. Work within or proximate to the railroad right-of-way on the main track is managed by representatives from our host railroads. Speak to your supervisor about coordinating with the appropriate group prior to commencing work.

### How to Cross Railroad Tracks

Prior to crossing tracks in any manner (foot, vehicle, etc.) you must stop, look, and listen for movement to ensure it is safe. Always cross in an area with a sufficient line of sight to ensure you can see an oncoming train.

When crossing the tracks, do so at a paved crossing surface. Only if these facilities are not available near your position should you cross directly over the open rails.

When your work requires you to cross over a track without a paved crossing surface minimize the time you spend within the track itself (called "the gauge"), do not cross diagonally or at widened switch points. Instead, cross at a 90-degree angle which is the same angle as the cross ties that run along the track.

Avoid crossing within the limits of the switch if possible and avoid stepping on the rails themselves. Rails are conductors of electricity and slippery when wet. See the illustration below:

**Avoid crossing railroad tracks if possible.**

**If you need to cross, do so at designated paved crossings.**

**Only if a designated crossing is not available should you cross directly over open rails.**

### Working Adjacent to Tracks

Rail equipment can overhang the rails of tracks by a foot or more. To determine that you are safe from being struck, your outstretched arm should be no closer than directly over the outside edge of the railroad tie (typically wooden) of the nearest track. See the image below.

If your work requires you to perform duties that are on the tracks or within striking distance of a train in an MSF, communicate with your supervisor and the employee responsible for train movements in the facility. They can ensure that you are properly protected from possible rail movement.

If your work requires you to perform duties that are on or near the railroad right-of-way, communicate with your supervisor. The host railroad will need to approve of this activity. They can ensure that you are properly protected from possible rail movement.

Under no circumstances are personnel without specific authority permitted to operate track switches, adjust blue flags or on-track derails or any other equipment on VRE Property or railroad property. No rail operations or mechanical department personnel are authorized to ask you to circumvent this rule.

## Managing Electrical and Pressure Hazards

Electrical power connection stations for rail equipment are located at the southern ends of each of VRE's MSFs and inside service and inspection buildings. These areas present tripping and electrocution hazards. Never step on or near the cables, and do not handle them or any of the components associated with the power stations. If something appears wrong, notify your supervisor.

Do not touch cables or hoses on or around rail equipment. Consider all cables to be energized and all hoses to be fully pressurized. If something does not look as it should, notify your supervisor.

**Always assume all hoses and cables are fully energized and pressurized and avoid contact.**

## Interacting with Rail Equipment

If your work requires climbing use three points of contact when mounting or dismounting equipment. Three points of contact ensures that you have one hand steadying your balance at all times to help prevent falls.

Expect movement from standing pieces of rail equipment at all times and only cross railroad tracks occupied by rail equipment when absolutely necessary. When rail equipment passes within close proximity to your location, stop your work and watch it pass.

Never crawl under or climb over rail equipment. Unless authorized by your VRE supervisor, never climb or ride on the outside of cars and locomotives.

If your work requires you to maintain radio contact with VRE mechanical or operations personnel, ensure that you perform radio checks following your job briefing to ensure proper communication.

## 8.0 WORK HABITS

VRE mandates strict adherence to all railroad, local, state and federal codes and regulations pertaining to safety and security. OSHA and Virginia OSHA codes are observed on VRE Property where applicable. If you damage VRE Property or goods, report it immediately. Do not try to make repairs yourself.

### Drug and Alcohol Rules

VRE has zero tolerance policy for drugs and alcohol. Being under the influence of drugs and/or alcohol while performing services for VRE will be grounds for immediately removal from VRE Property and/or termination of your contract or employment. Drug and alcohol and related paraphernalia are not permitted on VRE Property. VRE employees should anticipate random drug and alcohol testing. Contractors should have the capability to request random drug screenings of all employees performing safety sensitive work for VRE. Alert your supervisor immediately if you observe someone who appears to be under the influence of drugs or alcohol while performing work for VRE. Alert your supervisor immediately if you observe someone who appears to be under the influence of drugs or alcohol on VRE Property.

**VRE has zero tolerance policy for drugs and alcohol.**

### Non-Rail Equipment and Machinery Rules

Where applicable, personnel with licenses or documented qualifications will be permitted to operate rolling machine equipment on VRE Property. Seatbelts, harnesses, or restraint bars (where installed) must be worn at all times when operating machinery. Hydraulic and pneumatic lines must be inspected each calendar day, and cracks or other problems must be addressed before beginning work. Horns or other audible signals must be provided

before taking corners around buildings and other structures. Unless specially equipped with the proper hi-rail gear and on-track protection obtained, no self-propelled equipment such as backhoes, scissor-lifts, fork trucks or plow trucks may approach or make contact with the railroad track structure other than on designated crossing locations. Blades, buckets, arms and other extensions must only be used away from overhead cables and powerlines.

### Worksite Care

Neat worksites are a requirement for working on or about VRE Property, especially in areas utilized regularly by passengers or employees. Tripping hazards such as cables or building materials or other hazards that cannot be removed from the worksite must be clearly marked and barricaded where necessary. Debris must be kept away from walkways and trash must be removed from the worksite daily.

If you are working on a passenger platform when a VRE or Amtrak train arrives at the station or passengers are present, stop working and do not operate power tools louder than the average human voice. If you are working on a passenger platform when any train approaches, stop work, and observe the train until it passes. Report smoke, fire, sparks or shifted loads using the railroad contact information at the back of this manual.

### Tool and Equipment Care

Pework and daily inspections of tools and equipment are required when working in the VRE service area. All tools, equipment, and related components must be inspected prior to beginning work each day. If any element critical to the safety and proper functioning of the equipment, device, or tool is found to be damaged or otherwise in a state of disrepair, it must not be used and must be removed from the jobsite with proper markings preventing continued use until repair or replacement. Check to ensure that safety guards or appliances are in place and function properly. VRE does not permit the bypass of any safety device built into equipment brought onto VRE Property.

**All tools, equipment, and related components must be inspected prior to beginning work each day.**

### Personal and Commercial Vehicle Use

All employees, contractors and delivery drivers operating personal or company-owned vehicles must follow a maximum 5 mile-per-hour speed limit while on VRE Property. During times of reduced visibility, poor lighting, or where pedestrians may be present, vehicle speed must be controlled to permit stopping within one-half of the range of vision.

Personally owned and operated vehicles are not permitted within the Broad Run or Crossroads Maintenance and Storage Facilities. Authorized parking is outside each facility.

Vehicles issued by VRE, and its contractors may access the MSF to receive or deliver materials pertaining to VRE business but must not be parked and left unattended.

If you are issued a VRE parking permit, it must be displayed at all times while on or about VRE Property.

### Spills, Chemical, and Waste Handling

If a chemical spill occurs immediately report the incident to your VRE supervisor and deploy a spill kit. Sources of electricity or open flames near a flammable spill should be de-energized or extinguished as quickly as it can safely be performed. Spills of poison inhalation hazard (PIH) or toxic inhalation hazard (TIH) chemicals warrant immediate evacuation of the premises. Safety Data Sheets must be on-site for any appropriate chemicals being used on VRE Property. Illegally dumping, burying, or burning solid or liquid waste warrants removal from VRE Property.

### Inclement Weather

During inclement weather or extreme hot or cold, you must safeguard yourself against exposure. Hydration or warming breaks must be taken regularly. When thunder is heard, all outdoor work must cease. Sturdy and grounded shelter must be sought until the foreman or employee in charge determines through a reputable weather forecasting source that the storm danger has passed. Be aware of ice sheets on sloped buildings or platform canopies that could cause damage or injury during work beneath them. Do not drive through swiftly moving water on roads or pathways. Inclement weather should be discussed at every job and safety briefing as noted in the official Job & Safety Briefing Guides located in the appendix of this manual.

### Specialized Work

If you engage in specialized work that requires tasks such as welding, digging, or excavating, speak with your supervisor regarding standard operating procedures and VRE's requirements.

## 9.0 SECURITY PRINCIPLES

All employees have the responsibility to report any suspicious behavior or security concerns to their supervisor. Call 911 in the event of an emergency and make your VRE supervisor aware of the emergency as soon as it is safe to do so. Any instructions from local, state, and/or federal law enforcement must be followed.

**All employees have the responsibility to report any suspicious behavior or security concerns to their supervisor.**

All doors, gates, cabinets, and other elements with lockable securement must be kept closed and/or locked at all times unless active work requires that they be kept open. Doors and gates should not be blocked open unless necessary for the completion of your work. If you discover any signs of tampering, contact your VRE supervisor immediately.

During hours in which no one will be working, materials used for work must be stored or secured according to your safety and security plan or at the direction of your supervisor. Theft of any materials should be reported to your supervisor immediately. Theft of compressed gas canisters, derailing devices, or heavy track tools pose additional security risks and should be reported to your supervisor immediately.

Authorized VRE and KRSV employees are permitted to approve guests and/or visitors at MSFs specifically. Authorized VRE employees are permitted to approve guests and/or visitors at other VRE Properties as permitted by their role. All other contractors working on VRE Property are not permitted to grant others access to VRE Property. Unless specifically authorized or escorted, VRE contractors and subcontractors may not board VRE trains as passengers without a properly validated ticket.

If you are issued a VRE access badge, you must swipe your badge at the main entry gates, turnstiles, or office doors when entering, even if the entry point is already open. Badges and keys provided to contractors to access VRE facilities are the property of VRE and will be surrendered at the request of VRE's contract manager. Employees and contractors must immediately surrender any VRE access badges or keys at the

termination/conclusion of their employment or end of contract. Lost access badges and/or keys should be reported to VRE Safety & Security immediately.

No contractor or subcontractor personnel are permitted on VRE Property outside of their regularly scheduled work hours. Relief from this rule must be granted in writing by the VRE project manager.

Nonwork-related videography and photography are prohibited on VRE Property unless authorized by VRE.

## 10.0 GLOSSARY

**Ballast** – The crushed stone surrounding the track used to support it and prevent it from moving.

**Blue Flag/Blue Flag Protection** – Blue flags are hung on rail equipment and posted on tracks to prevent other rail equipment from running on the track. Mechanical department and/or management personnel apply blue flag protection when they are working on parked rail equipment. Only the employee who applied the blue flag can remove it. Blue flag protection laws can be found in the US Code of Federal Regulations under 49 CFR Part 218.

**Conductor** – The conductor is the chief member of the train crew. Conductors are given authority over the operations and functions of the train. They are assisted by individuals working in the position of Assistant Conductor.

**Derail** – A derail is a device that will derail equipment if in place when wheels roll over it. These safety devices are used to protect employees and other tracks from free rolling equipment. ***It is important that all VRE personnel and contractors be aware of the location and presence of these devices. Their theft and misuse are a concern in the rail industry. If you notice one missing, report it to your supervisor immediately.***

**Engineer** – The engineer is a member of the train crew and is responsible for the function and movement of the locomotive.

**Equipment Cables and Hoses** – Rail equipment requires a number of cables and hoses to function. When not handled by trained individuals, they can be hazardous. VRE trains use 480 volts AC to power lights and HVAC aboard the railcars and 110 psi air connections for brake lines. Stand clear of cables and hoses, especially when railcars are decoupled or disconnected from each other.

**Gauge** – The gauge of the track is the portion between the two rails. In North America, the width is 4' 8.5", which is considered the standard gauge.

**Head End Power (HEP)** – While the main generator aboard a locomotive is used to turn the wheels of the locomotive, a secondary generator called a head-end power (HEP)

generator can be found on VRE locomotives to power the light, heating, and air conditioning systems aboard passenger cars.

**Host Railroad** – The only tracks VRE owns are its rail yards. The main routes VRE uses to connect to Washington, D.C are owned by larger railroad companies and the Virginia Passenger Rail Authority who provide VRE trains access to their track for a fee. We refer to these organizations as our “host railroads” and VPRA. The host arrangements are as follows:

***Broad Run to Alexandria owned by Norfolk Southern Corporation***

***Crossroads to L’Enfant Plaza (Washington, D.C) owned by the CSXT Corporation and VPRA***

***L’Enfant Plaza to Washington Union Station owned by Amtrak.***

**Locomotive** – The locomotive is a piece of rail equipment that pulls our trains. It cannot accommodate passengers other than an operating crew within it. The locomotive functions with the use of a diesel engine that powers a generator that creates electricity that is then fed to motors that move its wheels.

**Power Pedestal/Layover Power/Ground Power** – VRE applies power to the railcars while they are parked to keep the railcar climate and other systems stable. These receptacles can be found at the south end of all VRE maintenance and storage facility tracks as well as the storage track located at L’Enfant Station. These receptacles can also be found at Amtrak’s Ivy City Coachyard where VRE trains are stored midday.

**Right-of-Way** – This is a term commonly used in the railroad industry to refer to the route a railroad takes through the surrounding communities.

**S&I Building** – Each yard has a service and inspection (S&I) building. Just like automobiles, railcars and locomotives must undergo a number of planned and unplanned repairs and inspections that take place in these buildings.

**Switch** – To move from one track to another, a system called a “switch” is used to divert rail equipment. These are common in VRE’s yards. Switches permit us to move equipment around to change out individual cars in our trains. A switch has two positions, lined for the normal route and “lined reverse.” When a switch is “reversed” it is not lined for the normal route.

**Switch Point** – The switch point is the track structure that begins the work of guiding wheels into the switch. They can be positioned by the use of the switch stand.

**Switch Stand** – The switch stand is a geared lever that a railroad employee can use to change the direction a train will take when it passes over the switch.

**Switch Target** – A switch target is a visual indicator to employees to tell the direction of movement the switch is lined for. When the switch stand is operated, the switch target automatically turns to correspond with the movement.

**Tie/Crosstie** – A crosstie is a wooden or concrete beam that supports the rail and helps hold the track together.

**VRE Property** – VRE Property includes any property that is owned or controlled by VRE.

**Yard** – A yard is generally defined in railroad terms as a series of tracks adjacent to a main route where trains and equipment can be parked or stored and are permitted to move at slow speeds without the permission from the train dispatcher who controls the main routes. Equipment moves in VRE yards under the permission of the mechanical department managers and never exceeds ten miles per hour.

**Yard Lead**- A yard lead is the main track within a yard that all other tracks diverge from.

**Notes:**

## **EXHIBIT B**

# **CRITICAL SAFETY ROLES FOR VRE PROJECTS**

**September 5, 2019**

## I. **PURPOSE**

The goal of the Virginia Railway Express (VRE) is to provide a safe and healthy worksite with zero accidents and injuries and no property damage or loss. VRE is committed to ensuring Contractors have a safe place to work emphasizing that Contractors are accountable for their safety.

## II. **VRE RESPONSIBILITIES**

- A. Provide a clear outline of all work rules in effect;
- B. Ensure Contractor compliance on VRE's rules and policies through announced and unannounced site inspections;
- C. Provide guidance and instruction on VRE-specific safety requirements, rules and regulations; and
- D. Provide quality inspections on Contractor training, compliance and any other area of safety and security.

## III. **CONTRACTOR RESPONSIBILITIES**

- A. The Contractor shall comply with, and ensure that the Contractor's personnel and subcontracted personnel comply with, all current applicable local, state, and federal policies, regulations and standards relating to safety and health, including, by way of illustration and not limitation, the standards of:
  - 1. The Host Railroad safety, security and general conduct rules and requirements;
  - 2. Federal Railroad Administration (FRA);
  - 3. Occupational Safety and Health Administration (OSHA) program of the Department of Labor and Industry for General Industry and for the Construction Industry (as applicable);
  - 4. The Federal Environmental Protection Agency Standards;
  - 5. Applicable standards of the Virginia Department of Environmental Quality; and
  - 6. VRE's Safety and Security Guidelines.

Where conflicts or discrepancies exist between requirements, the more stringent requirement shall govern.

- B. The Contractor shall exercise proper precaution at all times for the protection of persons and property and shall be responsible for all injury to persons and damage to property either on or off the site, which occur as a result of the Contractor's prosecution of the Work. Contractor shall correct any usage conditions and hazards on the job site and report any such hazards to VRE in a timely fashion.
1. Serve as the initial management for all medical and non-medical emergencies on sites.
  2. Provide initial medical attention involving first aid and triage for incidents involving injuries and contact the appropriate parties (including first responders) for support.
- C. Complete and submit one (1) electronic (.pdf) version of the “**Contractor Site Specific Safety Plan**” (SSSP) to VRE for review and approval prior to the start of work. The plan must be furnished within ten (10) calendar days of receipt of the “Notice of Intent to Award”, along with an original signature of Page 2, included in the “**Rules to Live By**” attachment, for each employee who will access VRE property. Ensure that the plan includes security procedures and protocols that shall be implemented and enforced at the site.
1. For Task Order Contracts, a SSSP is not required for award of the Contract. However, VRE reserves the right to require the Contractor to submit a SSSP for specific Task Order(s).
  2. The VRE Site Specific Safety Plan template is included as an Attachment to the Invitation for Bid (IFB) or Request for Proposal (RFP).
  3. VRE’s Rules to Live By can be found at the VRE Webpage <https://www.vre.org/careers/contractors/>.
- D. The Contractor and all its employees performing work on this Contract must complete the online Contractor safety and security orientation video provided by VRE at <https://www.vre.org/careers/contractors/>. Payment of employees for time spent completing the online safety training and any expenses incurred is the sole responsibility of the Contractor and is not eligible for reimbursement from VRE.
- E. Prior to mobilizing to the site, the Contractor shall provide to VRE, for information only, the following documents:
1. A list of all Contractor personnel expected to perform any work on the site and a copy of each employee’s Roadway Worker Protection training certification required by the Host Railroad.
  2. A record document signed by Contractor’s safety manager, including employee names and companies, noting that Contractor complied with VRE’s Safety Rules and Security as referenced in the General Provisions.

- F. If new employees begin work on the project at a later date and are not on the initial list of employees on the documents listed above, the same documents shall be provided to VRE prior to their beginning work on the project.
- G. Employees will not be allowed to work on the project until these documents are received by VRE.
- H. Equipment Limitations: Prior to beginning any work, coordinate with VRE the height, weight and placement of all cranes, boom trucks, scaffolds or similar equipment. Properly mark all equipment with safety flags and warning lights in accordance with approved Work and Activities Plan.
- I. Crane operators shall be certified to operate the equipment by an approved independent certifying agency.
- J. Unless otherwise allowed by an approved site permit, remove combustible debris from the site daily.
- K. All Contractor employees, and all employees of Subcontractors to Contractor, working for VRE at or near railroad facilities shall comply with all the safety and security requirements dictated by OSHA, Federal, State, and local laws and regulations as well as those required by Virginia Railway Express (VRE). In addition, all Contractor employees, and all employees of Subcontractors to Contractor, working at or near VRE railroad facilities must:
  - 1. Expect train movement on any track, at any time, in any direction;
  - 2. NOT cross, foul, sit on, or step on railroad tracks;
  - 3. Wear work boots at least six inches high, affording ankle support and protection, and are securely fastened; having a definite heel;
  - 4. Wear clothing that is not torn or baggy and fits well;
  - 5. Wear hard hat, eye protection with side shields, and an approved fluorescent vest at all times;
  - 6. NOT possess, consume, or be under the influence of intoxicants, narcotics, or other mood-altering substances, including medications;
  - 7. NOT engage in horseplay, fighting, practical jokes, scuffling, or wrestling; and
  - 8. Report all unsafe or hazardous conditions to your supervisor.

- L. Provide the VRE Project Manager with timely information pertinent to the job site including but not limited to:
1. Information on any environmental or contamination issues;
  2. Obtaining approval to store, handle or use any hazardous material, including but not limited to fuels for equipment;
  3. Obtain approval to perform any welding, cutting or hot work from VRE and Host Railroad.
  4. Specific plans for potential hazardous and project generated waste disposal;
  5. Specific plans on necessary safety parameters, such as welding, cutting or Hot Work;
  6. Ensuring adequate access and where necessary- signage to all areas for emergency response;
  7. Permit, confined space requirements, storm water issues, etc.;
  8. Safety cabinets, eyewash/shower stations, and fire protection systems;
  9. Establish the necessary safety precautions needed to perform work without endangering personnel and/or property;
  10. Other requirements as listed in the Contractor's Safety and Security Plan for a Specific.

#### **IV. HOST RAIL ROAD SAFETY REQUIREMENTS**

- A. When performing work within a Host Railroad Right-of-Way, the Contractor must conduct all work in accordance with rules, regulations, procedures, and safe practices of the respective Host Railroad. The Host Railroad and railroad location are provided on the Contract Plans. These safety documents include, but are not limited to, the following:
1. CSXT Safety and General Conduct Rules, latest edition
  2. NS Safety and General Conduct Rules, latest edition
  3. Amtrak Safety and General Conduct Rules, latest editions
  4. 49 CFR Part 214, Subpart B – Bridge Worker Safety Standards, latest edition

5. 49 CFR Part 214, Subpart C – Roadway Worker Protection, latest edition

6. Specific Host Railroad on Track Worker Safety Programs

B. Roadway Protection Worker Training also referred to as On Track Worker Safety Training may be accomplished through an approved third-party training company. Contractor shall provide evidence that the company and/or individual, providing the training, is approved by the Host Railroad. Contractor shall provide a certified list of employees and subcontractor employees who have successfully completed the approved required training. Additionally, all employees and subcontractor employees must possess, on their person, evidence of their training (i.e. badge) and shall present upon request from the CM, FRA or Host Railroad employee.

C. The Contractor must acknowledge that employees and sub-contractors are defined as Roadway Workers as specified by the following definition:

1. "Roadway Worker means any employee of a railroad, or of a contractor to a railroad, whose duties include inspection, construction, maintenance or repair of railroad track, bridges, roadway, signal and communication systems, electrical traction systems, roadway facilities or roadway maintenance machinery on or near track or with the potential of fouling a track, and flagmen and watchmen/lookouts as defined in CFR, Part 214."

D. Prior to commencing work on a Project, the Contractor must certify that all of their personnel (including subcontractors) working under this contract have received On-Track Contractor Roadway Protection Worker Training through an approved course. The program must comply with the FRA Regulation, and the content of the course must be approved by the Host Railroad Safety Program Administrator. This course must be completed annually by any Contractor working on Host Railroad property and right of way. With this annual renewal, proof must be furnished to the Host Railroad that the course has been completed for the current year. VRE cannot and shall not provide this training and it is the responsibility of the Contractor to solicit and obtain training for personnel on site.

#### **V. SAFETY GUIDELINES FOR CONTRACTORS**

A. The Contractor shall assume complete responsibility for the safe performance of all work on VRE property or equipment. This responsibility extends to the Contractor's employees, sub-contractor employees, and any person connected with a contracted project on VRE property.

B. The Contractor shall establish the necessary safety precautions needed to permit performance of work under operating conditions without endangering VRE personnel and/or property.

- C. The Contractor must report serious injuries, accidents and other unusual occurrences on the job site to the VRE Project Manager immediately.
- D. The Contractor's Safety Manager shall contact the VRE Project Manager, or appropriate designated contact person, when questions arise regarding the safe performance of a job or activity. The Project Manager will assist in developing a resolution to the safety issue in question.
- E. Violations of VRE safety rules and/or applicable federal, state, or municipal ordinances may result in temporary stand-down events, prolonged work stoppages or an evaluation of the Contractor or subcontractor's permission to continue to perform work on VRE's behalf.
